```

#### 1.c

## returning NA

```
meanOfShoeSize <- mean(df$Shoe_Size)
## Warning in mean.default(df$Shoe_Size): argument is not numeric or logical:</pre>
```

```
meanOfHeight <- mean(df$Height)
meanOfHeight

## [1] 68.57143
meanOfShoeSize

## [1] NA</pre>
```

## 1.d

The relationship between the two variables is that shoe size and height are positively correlated. In other words, if a person has a smaller height, they are likely to have a smaller shoe size.
